

Telecommunications

Longview has robust and economical telecommunications services for both small-medium businesses and large enterprises. Legacy copper networks as well as the most advanced Fiber optic based infrastructures are operated by locally based telecom companies providing digital voice switching and data transport speeds that exceed 10 Gigabits per second.

Below are just a few examples of the voice and data services currently available to Longview's small-medium size businesses:

- Gigabit FTTB (Fiber To The Business)
- GPON (Gigabit Passive Optical Network) up to 1 Gig download speeds
- DSL (Digital Subscriber Line) • ISDN (Integrated Services Digital Network)
- Private and Virtual Private Networking
- IP-based Networks supporting the latest in VoIP phone systems
- POTS (Plain Old Telephone Service)

In addition to the services above, for the needs of Longview's larger enterprises companies, we have deployed a next generation fiber optic infrastructure that supports virtually any communications technology:

- SONET (Synchronous Optical Networks) offering a variety of Optical Carrier solutions
- STN (Self-healing Transport Networks) • MPLS (Multi-protocol Label Switching) ATM (Asynchronous Transfer Mode)
- LAN (Local Area Network)
- As well as many other telecommunication services
